

Garmin SDK

Language: Monkey C (mixture of java, javascript, & Python)
↳ .mc files

- All of the logic is in source folder
- Menus are defined in resources/menus/menu.xml

for the climbing app, I'll need to use altitude (part of location module) and heart rate sensor (part of sensors).

for the UI:

- View = page (can be pushed/popped onto stack or replaced)
- InputDelegate = handles screen presses and button presses
