

## Changes in Plan Once I got started

After learning more about the Garmin Connect IQ SDK:

- History is irrelevant if I save as an Activity (because you can see it there)
- Page Down/Up functionality seems to be more user friendly than a menu.

### What Worked

- Monitoring current heart rate and altitude using built-in functionality
- Building an updating line graph showing change in altitude

### What Didn't

- Screen gets crowded easily (even with small font)  
↳ solution: Simplify UI
